

# EMERGENCY SHELTER KIT

The modular shelter design is a temporary, robust, panel-based structure that allows for easy extension to meet varying household space needs. The current design provides only living space that **households can adapt to their needs**.

It can be quickly dismantled and transported, making it suitable for temporary settings.

Installation of the **17 sq.m.** shelter, which accommodates up to **5 people**, typically takes around **1 day** with **one skilled and two unskilled workers**. This shelter can also be constructed through a household-led approach. However, vulnerable households, especially those requiring physical assistance, may face challenges in self-installation. The design can be modified for different household needs.

This document was developed by:

# Emergency Shelter Kit – Essential Components

## TIMBER BATTEN

94 PCS

Structural timber sections  
(5x 2.5cm x 2.4 m)  
rectangular shaped high  
quality free of knots-  
minimum density: 370  
KG/cubic meter - untreated.  
C16 or C24 graded timber.

## NAILS 50mm

2 KG

Hot galvanised iron, for wood,  
5cm (2") Used for structural  
joints and fixing cover-battens.

## ROPE 6mm

30 M

Polypropylene, diam.  
6mm, minimum 3 strands, twisted

## SHOVEL

1 PCS

Head with sharpened tip  
in forged steel which is  
tempered and hardened.  
Supplied with a handle.  
Total length: 100 to 110  
cm.(good quality)

## MEASURING TAPE

1 PCS

3 meters, graduated in  
centimetres.

## HINGES 75MM

4 PAIRS

Galvanized and rust resistant  
steel hinges suitable for timber  
window and door shutters.  
Hinges to be fixed with  
appropriate screws. (2 pairs for  
windows, 1 pair for door).

## TARPAULINS

5 PCS

Tarpaulin sheet UNHCR/IFRC  
standard specs: standard size  
(4x6m); Woven high-density  
polyethylene (HDPE) fabric  
laminated on both sides with  
low-density polyethylene  
(LDPE) coating White color  
3 used for structure, 1 for  
flooring, 1 for internal  
partition

## CLAW HAMMER

1 PCS

Claw Hammer - Weight: 0.45 kg.  
Fiberglass/metal handle,  
unbreakable. Head in forged  
steel. Good quality.

## HAND SAW

2 PCS

All-Purpose. Blade length of  
500mm and an overall length  
of approx. 640mm. 8 or 9 TPI  
(teeth per inch), hardpoint  
teeth from tempered and  
hardened steel. Unbreakable  
handle and good saw blade.

## SCALPEL\*

1 PCS

A cutting scalpel with blades ,  
suitable for light and medium  
work. Easy to use

## SCREWS

24 PCS

Galvanized wood screws,  
35mm length, for securing  
hinges to timber frames.  
Screws to match hinge type.  
NB: Hinges may come pre-  
packaged with their own  
screws

\*Note: It is recommended that items such as scalpel, for which approvals are uncertain should be palletized separately

# Emergency Shelter Kit – Maintenance Components

<b>DUCT TAPE</b>	<b>2 ROLLS</b>	<b>PLIERS</b>	<b>1 PCS</b>
Adhesive/duct tape of 25-meter length, water resistance – Extra Heavy Duty, 50mm		Combination pliers 150mm, 34mm jaw	
<b>PLASTIC FILM</b>	<b>50 M<sup>2</sup></b>	<b>BAG</b>	<b>1 PCS</b>
Plastic film 0.3mm thick, up to 50 sqm per shelter. Minimum width 4m		Heavy water-resistant cotton canvas. Strong webbing handles and heavy-duty nylon zip for distribution of the items 50kg	
<b>ROPE 3mm</b>	<b>30 M</b>	<b>NEEDLE</b>	<b>1 PCS</b>
Polypropylene, diam. 3mm, minimum 3 strands, twisted		Stitching, curved, 127mm x 1.8mm, hole 1x7mm	
<b>SANDBAGS*</b>	<b>21 PCS/LAYER</b>	<b>TIE WIRE</b>	<b>1 ROLL</b>
Empty woven polypropylene (PP) or polyethylene fabric sacks, 50 cm x 80 cm, minimum 80 GSM. Holds approx. 25–30 kg of sand or soil		Galvanised, diam. 1.5 mm, roll	

**\*Note: If it is not possible to procure sandbags, partners may coordinate with Food Security Cluster for access to flour sacks.**

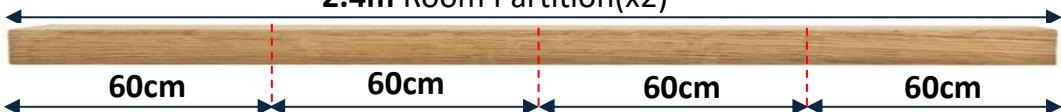

## ESSENTIAL MATERIAL REQUIREMENTS

Shelter component	Timber quantity	Tarpaulin quantity
Walls	Panels: 54, Door: 3, Windows: 4, Securing tarp: 4, Corner braces: 1	2
Roof	Truss x5: 15, Ridge: 2, truss braces 1, Securing tarp: 10	1
Floor	—	1
Partition	—	1
<b>TOTAL</b>	<b>94</b>	<b>5</b>

**Number of nails: 2KG**

**2.4m Room Partition(x2)**

Corner bracing, Door, Center or Rafter, Fixing Tarp, Anchoring

**1.8m Truss: securing tarp**

**60cm Walls: securing tarp**

**1.9m Door Frame**

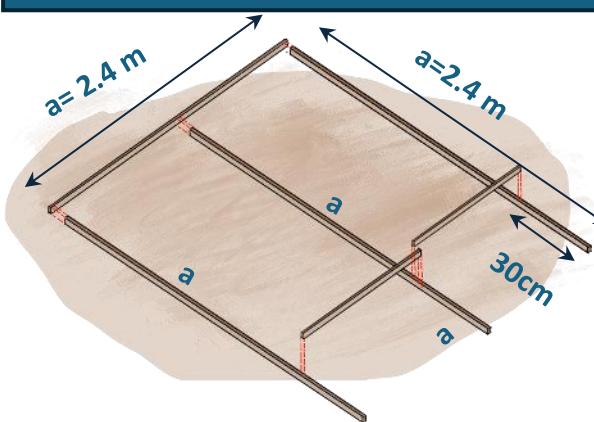

**50cm Walls: securing tarp**

**1.2m Window openings**

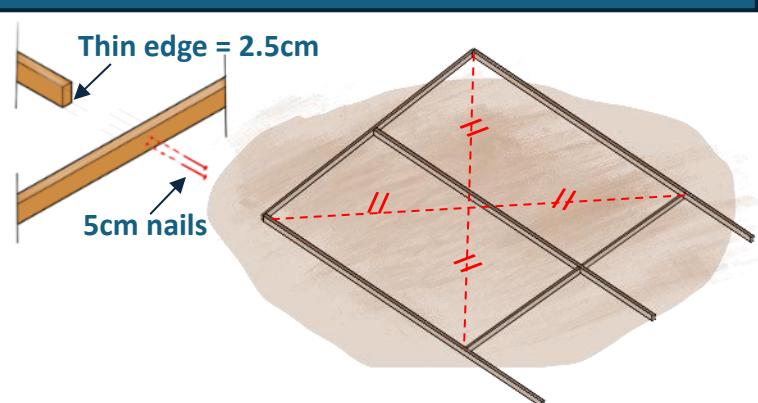

**1.2m Window openings**

# How to Build Wall Panels

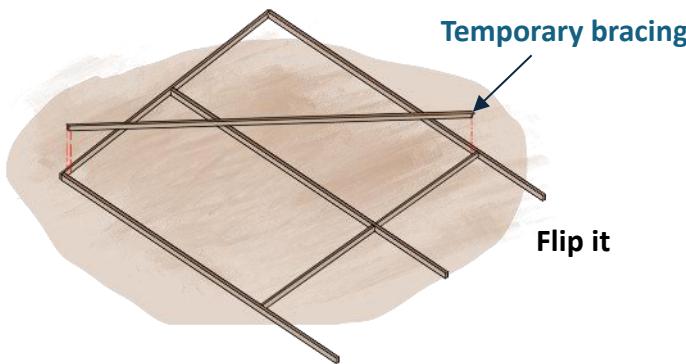

Before starting to build your shelter, **always clear the area of debris, rocks, and plants, and flatten the ground** to create a stable and safe base.

**1. Lay out the pieces of timber, standing them up on the thin edge. Nail the timber together using 5cm nails.**

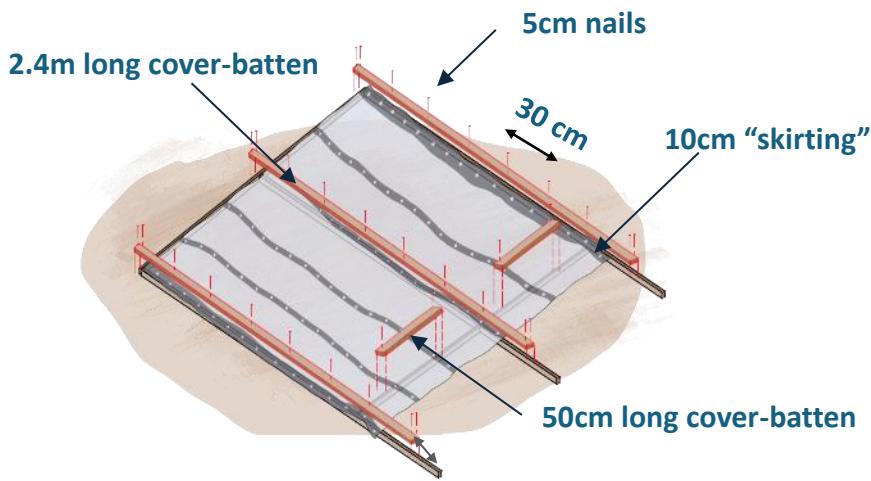

**2. Check squareness by measuring both diagonals, measurements should be equal.**

**3. Add temporary bracing (of any size) to hold the panel square, then flip it to fix the tarpaulin.**

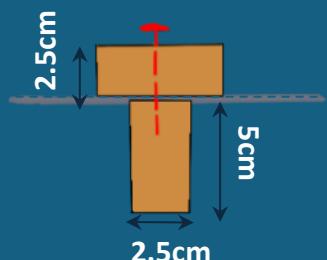

**4. Lay tarpaulin over the frame, leaving 10cm below to prevent water entry and aid anchoring.**

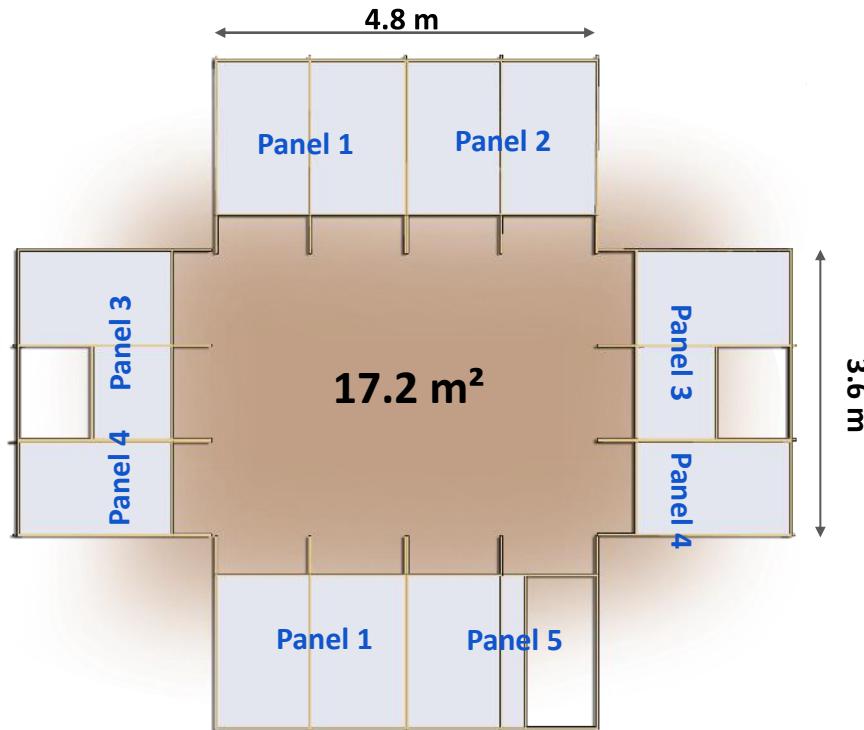

**5. Fix tarpaulin with 5 cm nails through 2.4 m cover battens at 30 cm spacing, then add 50 cm horizontal battens over it.**

**The frame is constructed as a T-section which makes it strong.**

**The tarpaulin should be pulled tight to keep the structure square, but not so tight that it bends the timber.**

# Wall Panels Details

Household size  
(# people)

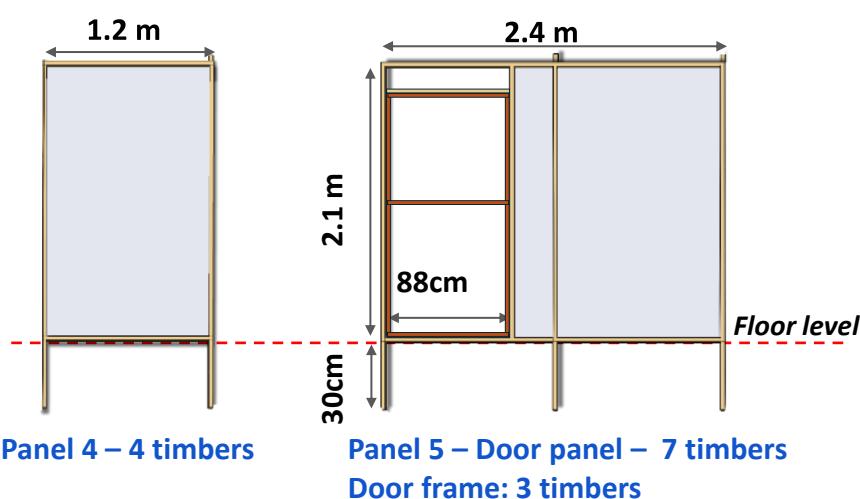

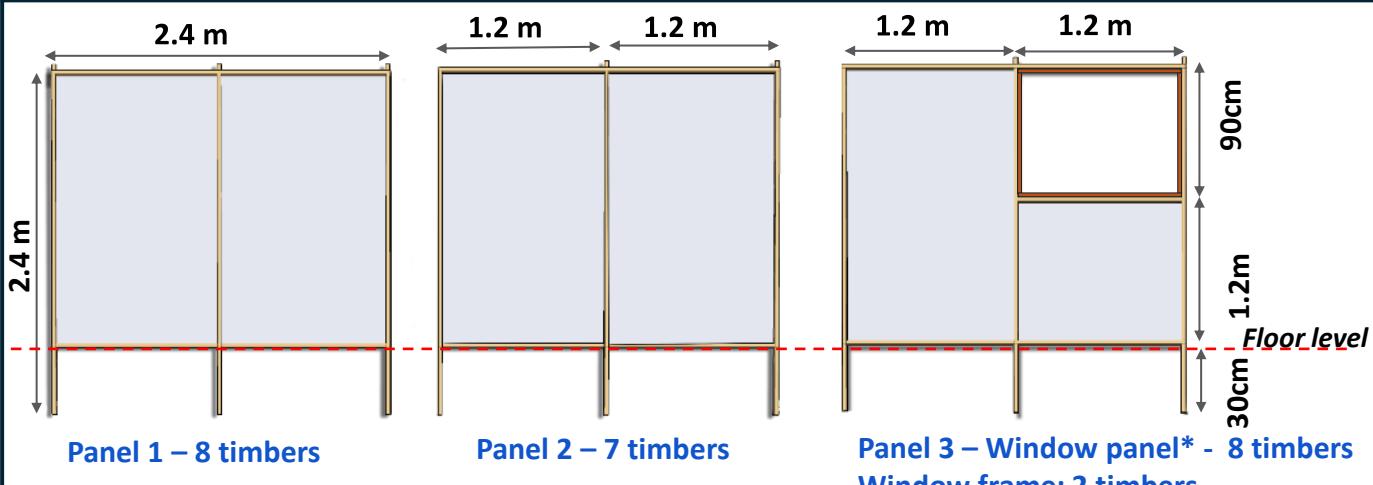

5

Shelter size (m<sup>2</sup>)

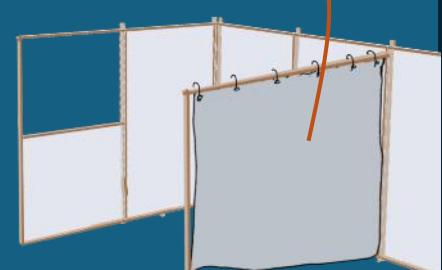

4.8x3.6= 17.2m<sup>2</sup>

Embed poles 30 cm deep, keep internal height at 2.1 m

Install door and window shutters with hinges and screws.

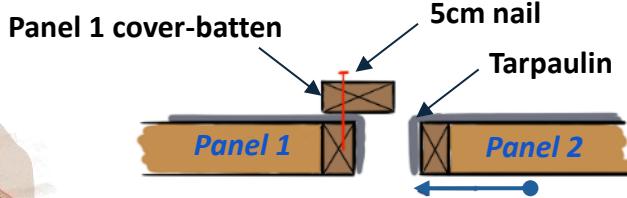

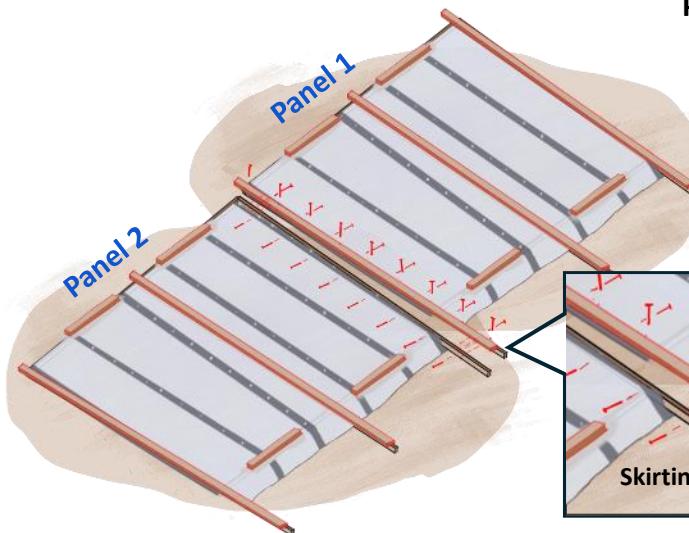

An internal movable partitions can be added using a tarpaulin

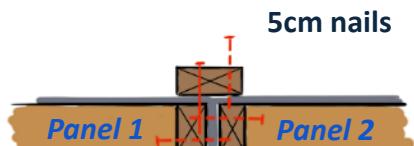

\* Households are advised to choose door and window sizes and position based on their privacy and security needs.

# Wall Panels

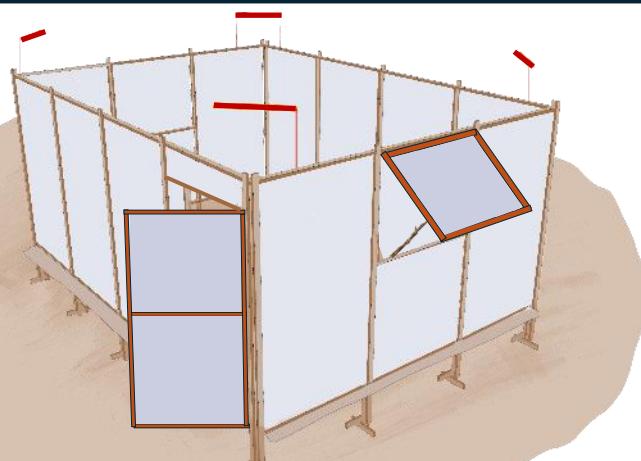

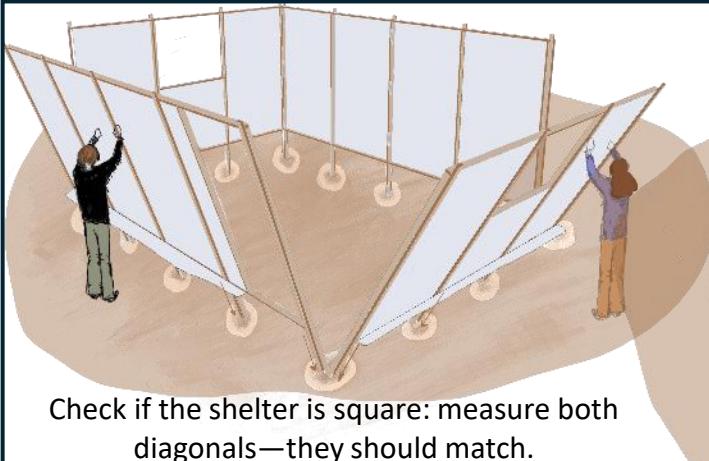

- Move Panel 2 closer to Panel 1**
- Connect** the panels together by nailing the cover-batten
- Nail** the cover-batten timbers once the panels are lifted

## Lift the panels together.

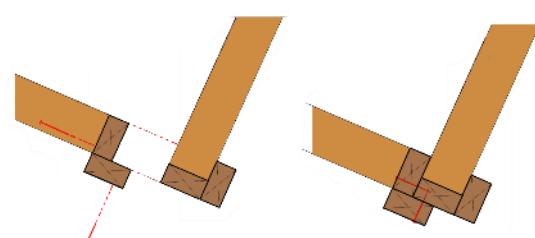

## Add corner bracing

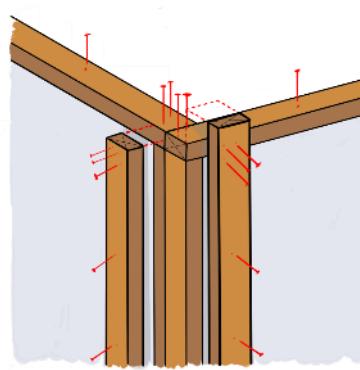

Check if the shelter is square: measure both diagonals—they should match.

**Add door and window frames\***: a side-hinged door and two top-hung windows that serve as a canopy for privacy, weather and sun protection.

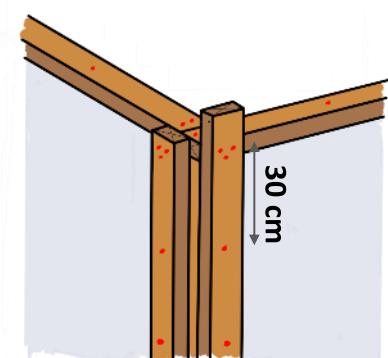

## How is the corner joined together?

Shelter Corner - Plan view

Connect the corners securely using 5cm nails

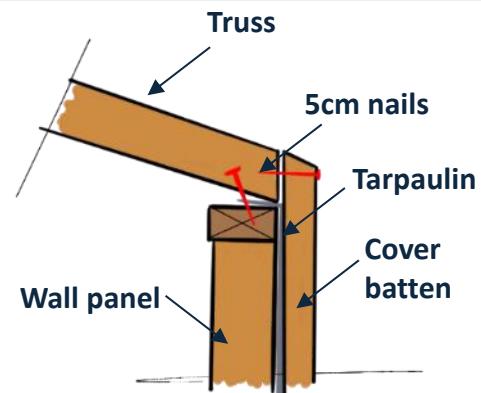

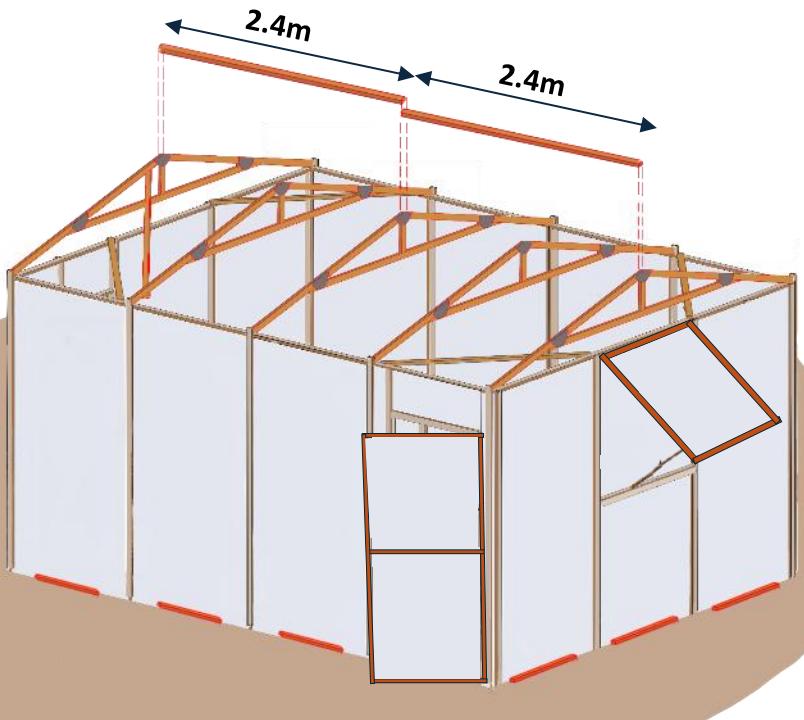

\* Households can add mesh for insect protection and privacy. A canopy can be installed over doors to reduce water ingress.

# Pitched Roof

**Use two 2.4 m lengths for the ridge beam.**

They connect the trusses and support the tarpaulin.

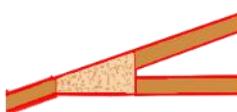

**Timber connection detail - 01**

**Fix diagonal braces at both ends, attach them to the underside of the first two and last two trusses.**

## Alternative 01:

**OSB or plywood gusset plates** for stronger joints

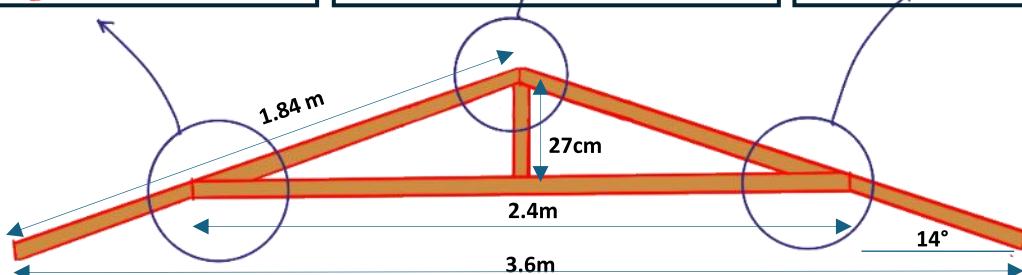

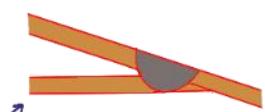

## Alternative 02:

**Horizontal pieces of timber** are doubled, one on either side.

## Alternative 03:

**Used tin cans** can make strong connections when OSB or plywood is unavailable

**To ensure uniformity and save time, construct all trusses simultaneously**

by stacking them one on top of the other or using one as a template.

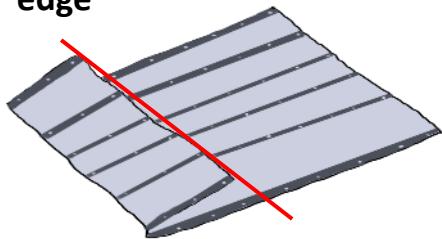

This approach guarantees that each truss is identical and reduces the risk of errors during the assembly process.

# Pitched Roof Cover

## 1. Fold the Tarpaulin to facilitate its raising to the roof

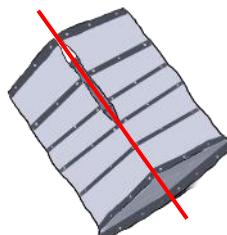

### First fold:

**Fold the left-hand edge towards the centre line. Repeat for right-hand edge**

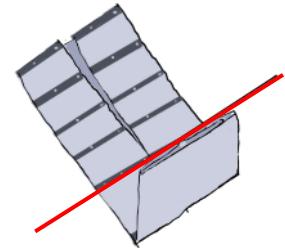

### Second fold:

**Fold both sides again to the centre.**

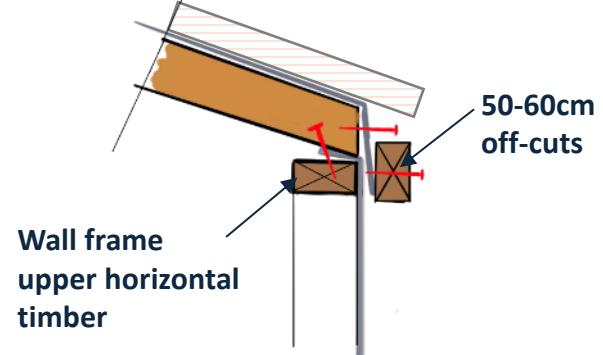

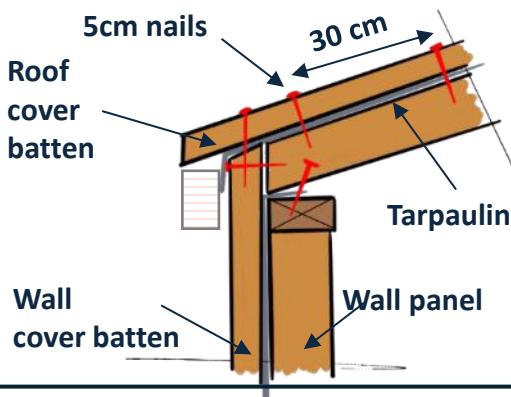

### Third fold:

**Fold top and bottom to the centre as shown.**

## 2. Lift the folded tarpaulin on to the middle of the roof. Progressively unroll the tarpaulin over the roof structure.

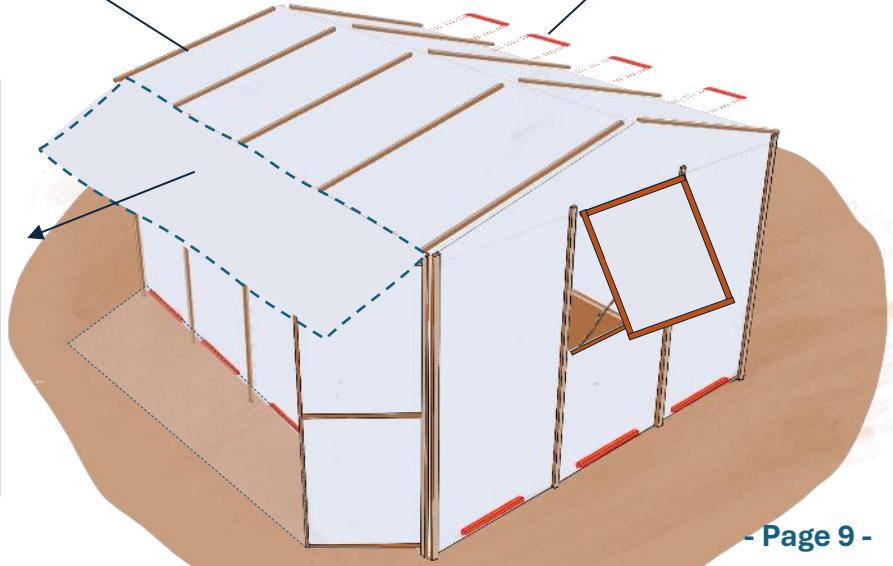

## 3. Add timber cover battens to secure the tarpaulin to the trusses. Use the short off-cuts to nail tarp to the top of the walls.

Timber connection detail - 02

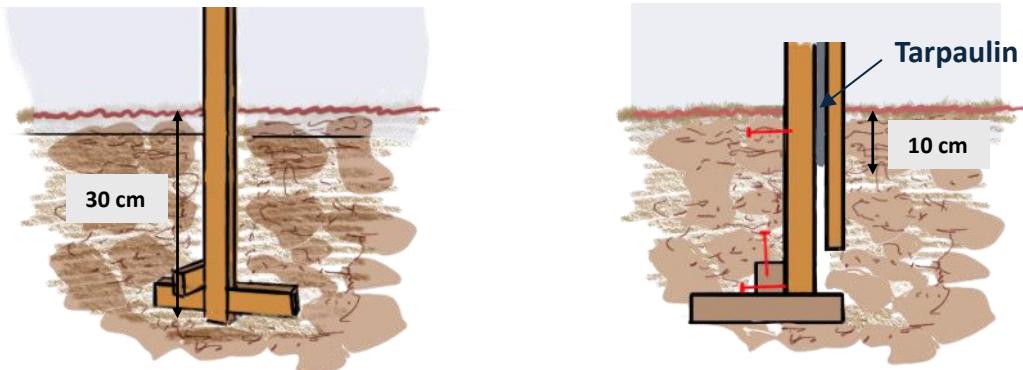

Add 50-60 cm off-cuts to secure roof tarpaulin

**Add a sloped canopy above the door to prevent rainwater entry. If there is space, extend the canopy sideways to create a sheltered cooking space**

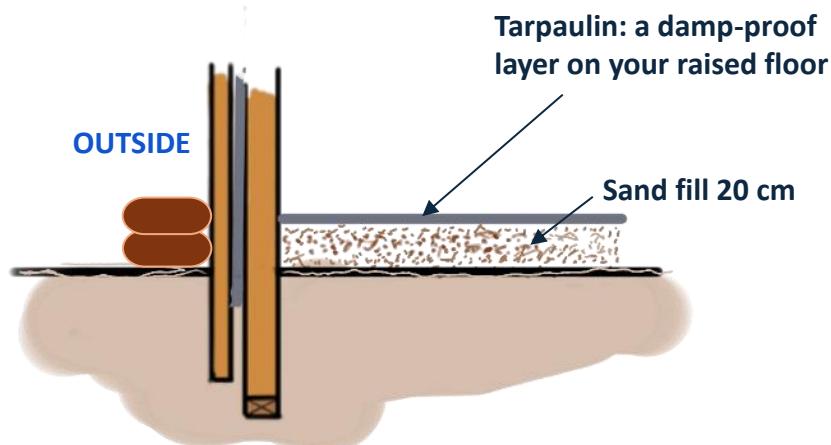

# Flooring and Anchoring

Embed poles 30 cm deep. Bury tarpaulin edges 10 cm into the ground.

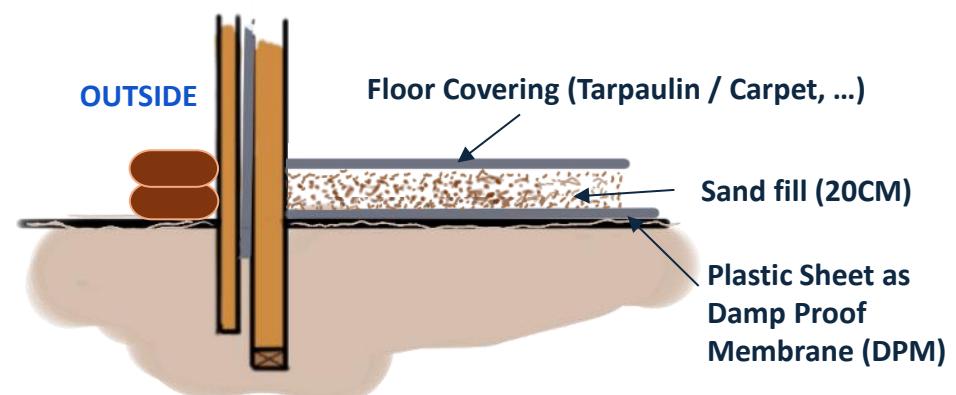

## Raise the Shelter Floor

Raise the floor 20 cm with compacted sand and place sandbags around the perimeter to prevent water entry.

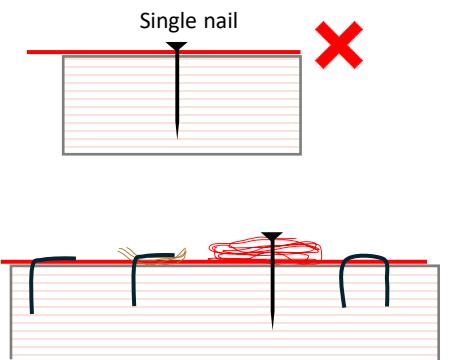

If materials are available, it is a good idea to have a raised floor inside the shelter that is kept dry and contained by a plastic sheet (a damp-proof membrane - DPM).

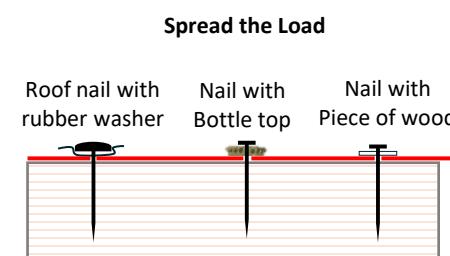

# Tarpaulin and Timber connection

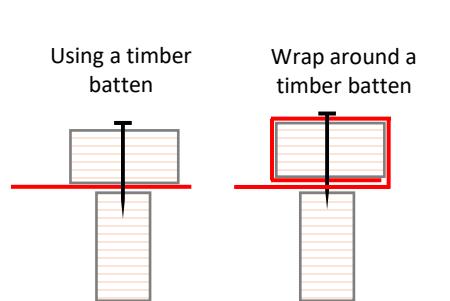

WEAKER

Standard nails will easily pull through tarpaulin as they have small heads

Standards nails can be improved by bending them or nailing them through folded tarpaulin or rope. U-shaped fencing staples can also be used.

Standard nails can be improved using washers or bottle caps (sharp side away from tarpaulin) to spread the load. Alternatively domed head nails can be used.

Using timber battening is very good for spreading the load.

Tarpaulin should be folded over on itself at connection points.

As far as possible, the tarpaulin should be fixed along all edges to spread the load.

References: "Shelter Cluster website, Hurricane Beryl 2024 - Regional Response, Fixing tarpaulin" and "OXFAM Technical Brief – Plastic sheeting use and procurement in humanitarian relief"

The connections shown above also help seal nail heads by using folded tarpaulin, washers, bottle caps, small wood pieces, or timber battens—reducing the risk of roof leaks. When available, **screws with rubber washers** can also be considered for improved sealing.

## HELPFUL TIP

Once good-quality tarpaulin is procured, it's essential to fix it in a way that

- ✓ Spreads the load,
- ✓ Prevents flapping,
- ✓ Avoids friction points,
- ✓ Limits heat buildup.

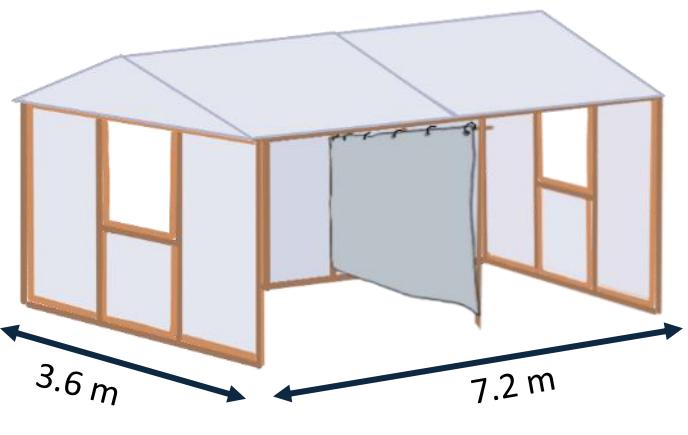

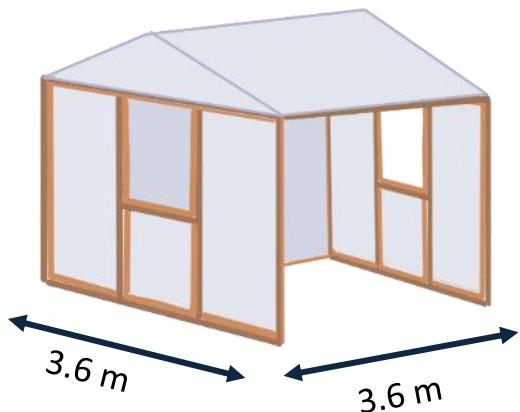

To avoid tearing, fixings should be distributed over a wide area.

# Modular Shelter Extensions for Adaptable Space Needs

The modular design of the shelter enables easy extension to accommodate households of varying size.

To avoid weakening the structure, **the shelter width should not exceed 3.6 m**, while the length can be adjusted as needed.

In the following section, we will explore adaptable models that allow for incremental extensions using the same panel system described on page 5.

**Household  
Size\***

3-4 people

**Shelter size**

$3.6 \times 3.6 = 13 \text{ m}^2$

6-7 people

$7.2 \times 3.6 = 26 \text{ m}^2$

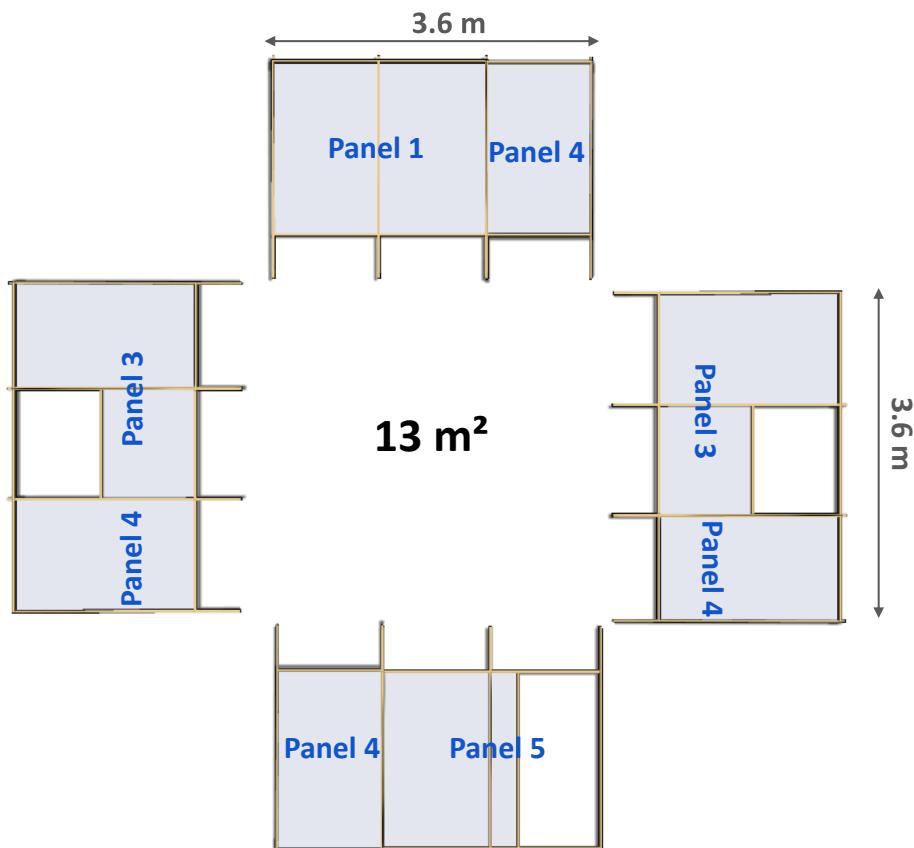

## HOUSEHOLD SIZE (# PEOPLE)

3

4

## SHELTER SIZE (M<sup>2</sup>)

3.6x3.6= 13 m<sup>2</sup>

## ESSENTIAL MATERIAL REQUIREMENTS

Shelter component	Timber quantity	Tarpaulin quantity
Walls	Panels: 47, Door: 3, Windows: 4, Securing wall tarp: 3, Corner braces: 1	2
Roof	Truss x4: 12, Ridge: 1.5, truss braces: 1, Securing roof tarp: 8	1
Floor	—	1
Partition	—	1
<b>TOTAL</b>	<b>81</b>	<b>5</b>
